First Record of the Spider *Neotama mexicana* (Hersiliidae: Araneae) from Trinidad and Tobago

The first Bioblitz event held in Trinidad and Tobago was held in Tucker Valley, Chaguaramas in north-west Trinidad from 17 to 18 November, 2012. Field collection yielded an adult female *Neotama mexicana* (O.P. Cambridge). This is the first record of the species for Trinidad and Tobago. Prior to this specimen, the family Hersiliidae was presumed to be present but not confirmed (Sewlal and Cutler 2003). The nearest known collection site was in Guyana (Platnick 2013). Sewlal (2012) confirmed 52 spider families for Trinidad and Tobago. This discovery brings the total to 53.

This specimen (Catalog no. UWIZM.2013.1.1) was deposited in the Land Arthropod Collection of the University of the West Indies, St. Augustine, Trinidad and Tobago. The name of the collector is unknown.

ACKNOWLEDGEMENTS

Many thanks to Mike Rutherford for organising the Bioblitz event and Bruce Cutler for commenting on this note.
